

INVITING. WARM. ELEGANT.
MAJESTIC. COZY. CLASSICAL.
CONTEMPORARY. RUSTIC. DISTINCT.

Let Carolina Colortones help you to define your home.

For over 25 years Carolina Colortones has helped Western North Carolina discover the personality of its resident's homes with a wide selection of quality products and finishes.

CAROLINA DECKING

Carolina Colortones' decking division, Carolina Decking, features low maintenance exotic hardwood and composite decking. Also offered is a full line of decking accessories including rails and fasteners.

SERVICES

We offer free estimates for siding and decking, a loaded showroom featuring dozens of siding styles and colors, installation consulting and custom samples. Let our in house customer service representatives help you define your home!

ABOUT CAROLINA COLORTONES

A family run business, we have been serving the region for over 25 years. Our three flow coater machines and 50,000 square feet of warehouse space gives us an enormous capacity, finishing six to twelve houses worth of siding and trim a day, rain or shine! We have Finished-Wood.Com, which provides factory direct prefinished products shipped nationwide.

As second generation owners, my brother Guy and I want to establish and maintain relationships with our customers, as our father did before us. Thanks!

THE FINISHES

The selection of finishes and colors Carolina Colortones offers cannot be matched. Choose from a number of manufacturer color choices or let us find that color that is absent on any color pallet. Paint and stain brands include:

THE PRODUCTS

Carolina Colortones not only offers the finest common products, but is your resource for hard to find species, patterns and styles. Materials include:

- Hardiplank
- MiraTec
- Cedar bevel, channel rustic & trim
- Pine bevel, channel rustic & trim
- Plywood Sidings
- Cypress, cedar, pine & spruce T&G
- Wavy Edge Pine Siding
- D-Log and chink log sidings
- Cedar shingles and shingle panels
- Much, much more!

PROCESS

The prefinish process is the foundation for the quality builders and homeowners have come to expect from Carolina Colortones over the last two decades.

1. Controlled temperature and humidity levels stabilize any moisture in the wood; application conditions are optimal.
2. Natural wood or engineered siding is fed into the machine applicator and flooded with your custom paint or stain.
3. Pressure rollers spread the coating evenly.
4. High speed brushes drive paint or stain into all six sides of the wood for maximum protection. Back-priming reduces shrinking and swelling and improves siding durability.
5. Proper spread rates and uniform color coverage provide a beautiful finish with the highest outdoor performance standards.

BENEFITS

Controlled Environment: Rarely on a jobsite can you get the combination of clean, dry siding and fair weather for painting. Carolina Colortones can ensure those conditions 365 days a year!

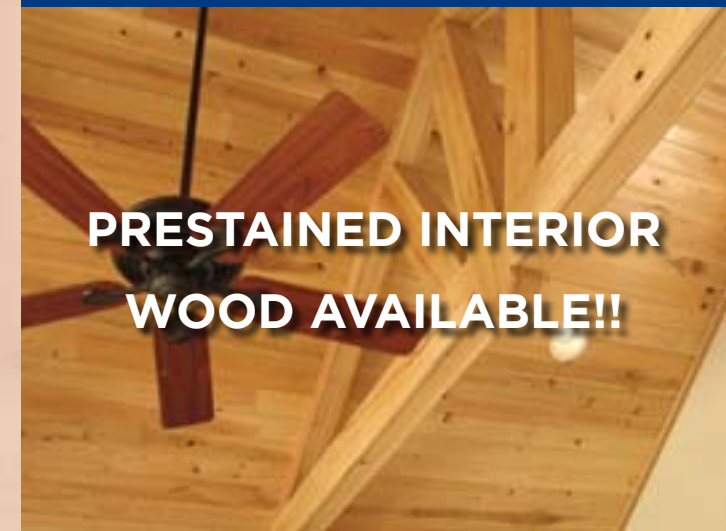

Even & Consistent Coatings: The machine process makes certain that the last board run gets the same amount of finish as the first board run. Plus, no overspray, shrink lines or lap marks to worry about.

Immediate Curb Appeal: The beauty of homes unfolds as each piece is installed.

Unmatched Quality: Even the best painter cannot deny the quality attained by prefinishing material.

Cost Savings & Value: Prefinishing saves time and can cost less for the quality. Longer finishes means less work and money spent in the long run.
