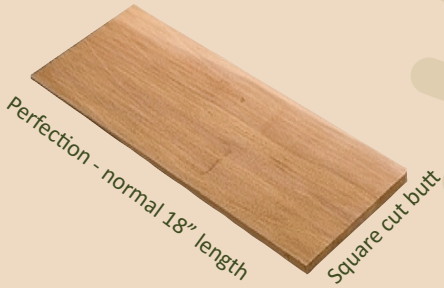
Prefinished Perfection and R&Rs Cedar Shakes

Carolina Colortones prefinishes high-quality Western Red Cedar Perfection and R&R Shakes. These type of architecturally uniform cedar shake are preferred for its natural and tailored appearence. Re-Butted & Re-Jointed (R&R) shakes are re-manufactured from a Perfection shakes that have been kiln dried to pre-shrink and stablize the wood. The R&R Shakes have been re-cut and re-sawn to be square and parallel on all four edges. The perfectly square edges make for a speedy installation and result in a more refined appearance. These are used on traditional and modern residential and non-residential structures.



Finish Types:

Paint & Solid color/body stains are recommended for smooth, saw-texture and split surface. These finishes are durable/flexible, great color retention and contain mold & mildew inhibitors.

Transparent/natural finishes are recommended for saw texture and split sufaces. These penetrating oil based stains have the shortest service life. Mold & mildew inhibitors and UV filters are offered by the good chemistry brands.

Semi-transparent finishes are recommended for saw texture and split surfaces. They have a better service life than the transparent stains because they have added pigment for additional UV protection. Mold & mildew inhibitors and UV filters are offered by the good chemistry brands.
